About the Workshop

The West Virginia State Energy Program was developed to increase awareness and engagement of West Virginia industries in energy related technical assistance services provided through the West Virginia Department of Energy's partnership with the WVU Industrial Assessment Center, the WVU Industrial Extension, and the WV Manufacturing Extension Partnership.

The focus of this day-long workshop will be to provide participants with information about various topics that help to improve day to day operations, and increasing energy efficiency, thereby reducing energy costs, allowing more money to be devoted to the bottom line. The agenda for the day will include:

- Lean Manufacturing Principles
- Continuous Improvement
- In-Plant Tour & Data Collection
- Energy Efficiency Measures
- Smart Manufacturing

About the Presenters

David Carrick

WVU Industrial Extension

The WVU Industrial Extension, also serving as the West Virginia Manufacturing Extension Partnership has an impressive 20 year history of assisting and strengthening manufacturing in West Virginia through a variety of services including innovation, process improvement, lean manufacturing, and more.

Bhaskaran Gopalakrishnan

WVU-Industrial Assessment Center

Dr. Gopalakrishnan is well qualified in the technical and managerial aspects of delivering high-value energy services to industrial clients in the form of energy efficiency assessments, technical assistance, technical training, and energy management (ISO 50001).
